

Gårdsfisk, Scandinavian Aquasystems AB

Gårdsfisk is interested in feed development, manure management, energy efficiency and commercialization. It has several ongoing and completed projects with partial public funding and is also today a test environment for projects run by i.e. Swedish University of Agricultural Sciences, RISE, Stockholm resilience center and Swedish Veterinary Institute. The company has participated in projects funded by i.e. EU maritime and fisheries fund "Swedish brood program for Warm-water food fish", LEADER Skånes ESS, EU Agricultural Fund, Vinnova Fund, "Management of residual flows from fish farming to agriculture", Region Skånes Environmental Protection Fund, Almi, Sten K Johnson Foundation. .

Gårdsfisk role concerns WP4: SupportLoop. Its own practical expertise from Sweden is used in an assessment of the establishment of a recirculated aquaculture facility on a Danish traditional farm in relation to animal units, spreading area, water use, resource efficiency, etc. Suggested applied technology and RAS plant design will be included. Assessment of environmental, climate and land-use impacts of transition to fish from other livestock production will be made. Economic assessment of the adaptation from a traditional agricultural property to one with a fish production, establishment and running costs will be made, considering also regulation.
