

Guldborgsund Municipality

[Bioeconomy Hotspot Guldborgsund](#), the municipal anchor for bioeconomy projects, host and organizer of the annual Danish Bioeconomy Conference and secretariat for Agri-Aqua Innovation Partnership Denmark, has many years of experience with national, international and various INTERREG program projects (i.e. BLUE PLATFORM, TETRAS (BSR), BIOCAS (NSR), INNOAQUATECH (SB)). Guldborgsund Municipality is actively engaged in the Brussels EU Office of Region Zealand and is a member of the SUBMARINER Network EEIG for Sustainable Blue Growth.

Guldborgsund Municipality takes the role of [WP4 SupportLoop](#) Leader to coordinate and investigate the possibilities and challenges of establishing a recirculating aquaculture plant for fresh and saltwater aquaculture on a traditional farm in a Danish context, with focus on environment, climate and economy. The valorizing of the synergy and symbioses between the agri- and aquacultural sectors, is paramount to closing the nutrient loop and encouraging new cross-sectoral, sustainable solutions towards no-waste productions.
