

VKST

VKST is one of the largest agricultural consulting houses in DK. It has specialists in accounting, tax, business management, construction counseling, crops, livestock, organic agriculture, nature management, environment and sustainability assessments.

VKST has experience with a range of larger projects e.g., subcontractors for the state concerning water catchment area and carbon-rich soils, plus subsidy applications i.e. concerning environmental technology.

VKST role within AquaLoop concerns [WP4: SupportLoop](#). In WP4 VKST studies and performs a business plan translation of the Swedish aquaculture into Danish context. The main purpose of this RAS facility assessment is to inform and guide Danish ag. farmers who wish to be aquacultural farmers. In the assessment relevant terms and restrictions will be investigated and displayed. There is a focus on wastewater and nutrient management methods according to Danish law and environmental conditions. Furthermore, an agri- to aquaculture economic assessment will be performed, incl. ESG-analysis to illuminate the possible assets of the Swedish RAS in a Danish setting.

VKST also contributes to cross-border partner meetings, workshops, and conferences plus to training and dissemination of the project.
